in liquid nitrogen. Pod walls were pooled for mRNA extraction. CDNA was prepared from polyA+ enriched RNA. The CDNA was directionally ligated into the Unisap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper hade and propogated in XLOLR cells."

/note="vector: pBluescript SK; Site_1: Ecorl; Site_2:
XNOI; cDNA was prepared from polyA+ enriched RNA from
roots harvested at 10, 17, 22, 31 and 38 days
post-incollation with Glomus versiforme. The cDNA was
directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gloapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/note="Vector: palescript II XR; Site_1: ECORI; Site_2: XhoI; Root cDNA. The mRNA was isolated from entire roots of 8 day old "Williams' seedlings which were propagated on paper towels with distilled water. Stratagene's cDNA synthesis Kit (catalog #200401) was used to synthesize the CDNA. First- strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA is hemimethylated.

Stratagene's first-strand synthesis primer was used [GAGGAGAGAGAGAGACATCTCGAG(T).18]. After second-strand synthesis, the CDNA ends were 'polished' with clone Ptu DNA polymerase, ligated to EcoRI adapters, and phosphorylated. The XhoI site within the first-strand synthesis primer was restricted by digestion with XhoI, all XhoI sites in the CDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using dibcobRL Life size-fractionated with a 500bp cutoff, using dibcobRL Life Technologies' CDNA size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) that had been digested with ECORI and ANDI, and phosphorylated). Both the white and blue colonies appear to contain recombinant plasmids with CDNA inserts. Blue colonies 90-15) have been
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequenced, and possess putative cDNA inserts. This library was constructed by Dr. Paul Keim & Virginia H. Coryell,

/note="Vector: pBK-CWY, Site=1: EcoRI; Site=2: XhoI; This cDMA library was constructed from polyA+ enriched mRNA from green seed coats in mid to late developemental stage, average fresh weight 250 map per seed. Traces of pod and embryo tissue also present. Complementary DNA was synthesized from mRNA using an XhoI-poly(dT)
linker-primer. EcoRI adopters were lighted to the blunt-ended cDNA fragments and the products were digested with XhoI for directional cloning into lambda ZAP Express vector. This lambda library was amphilited once using E. coli host strain XLI Blue MRF'. Inserts were then subcloned by mass excision using Exassist helper phage for conversion into phagemid vector pBK-CMV in E. coli host

                                                                                                                                                                                                                                                                                                                                                                                                  /note="Vector: pBluescript II SK+; Site_I: EcoRI; Site_2:
XhoI; The CDNA library was constructed from mRNA isolated
from degenerating cotyledons of 9-10 day old etholated
seedlings for the cultivar Williams. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
directionally cloned into the EcoRI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments
were transformed into DHIOB host cells (GibcoBR). This
library was constructed in the laboratory of Dr. Randy

Alea Stage="roots harvested at 10 days post inoculation with Phytophthora medicaginis"

Alab_host="b. coli strain XLOLR"

Anote="vector: peluescript SK-; Site_1: EcoRI; Site_2:

XhoI; cDNA was prepared from polyA+ enriched RNA from roots harvested at 10 days post inoculation with Phytophthora medicaginis. The cDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells. Note: EST may be of fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Email: benning@msu.edu

/note="Vector: pBluescript pSK; Site_1: EcoRI; Site_2:
XhoI; Plants were grown in an aeroponic chamber for 14
days on nitrogen-rich medium followed by 3 days on N-free
medium. RNA was extracted from root tips (1-3 cm). CDNA
was prepared from polyA+ enriched RNA. The cDNA was
directionally ligated into Uni-zapxR vector from
Stratagene and packaged using Giapack Gold packaging
extracts. Plasmids containing cDNA inserts were
mass-excised from phage stocks using ExAssit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France)."

//Anoi. colnA was prepared from polyA+ enriched RNA. The cDNA
was directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

Sequence 12, Application US/09090793

Patent No. 6140486

GENERAL INFORMATION:

APPLICANT: Calgene, LLC

TITLE OF INVENTION: Production of polyunsaturated fatty acids by expression

TITLE OF INVENTION: Of polyketide-like synthesis genes in plants

TITLE OF INVENTION: Of polyketide-like synthesis genes in plants

TITLE OF INVENTION: 01 polyketide-like synthesis genes in plants

CURRENT APPLICATION NUMBER: US/09/090,793

CURRENT FILING DATE: 1998-06-04

NUMBER OF SEQ ID NOS: 66

SEQ ID NO 12

LENGTH: 40138

Sequence 4, Application US/08087772A
Sequence 4, Application US/08087772A
Patent No. 5691155
GENERAL INFORMATION:
APPLICANT: Nahmias, Clara
APPLICANT: Emorine, Jean L.
APPLICANT: Strosberg, Donny A.
TITLE OF INVENTION: Nucleotide Sequences Encoding the Murine
TITLE OF INVENTION: Beta3-Adrenergic Receptor and Their Applications
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
